

WINDOW STARS... Star 1.

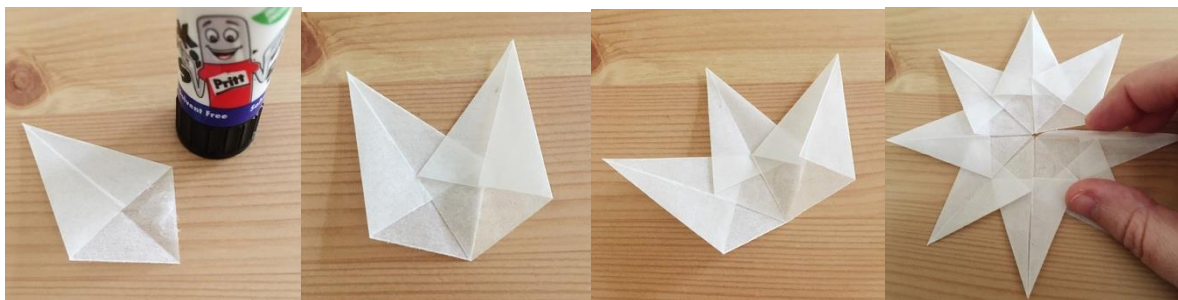

Step 1: Fold the kite paper in half, then cut along the fold. Fold each half of the kite paper in half again, then cut along the folds. Repeat with your second sheet of kite paper. You will end up with 8 squares of kite paper.

Step 2: Fold each square in half along a diagonal line, so that when you open the paper it reveals two triangles. Fold both corners of the paper in to meet the centre fold. Repeat this process with all eight squares of kite paper.

Step 3: Now you are ready to secure the pieces of kite paper together to form a star. Place a small dot of glue in the bottom right triangle. Lay your second piece of kite paper on top, as shown in the photograph. Repeat the process with all eight pieces, tucking the very last piece under the first and securing with glue.

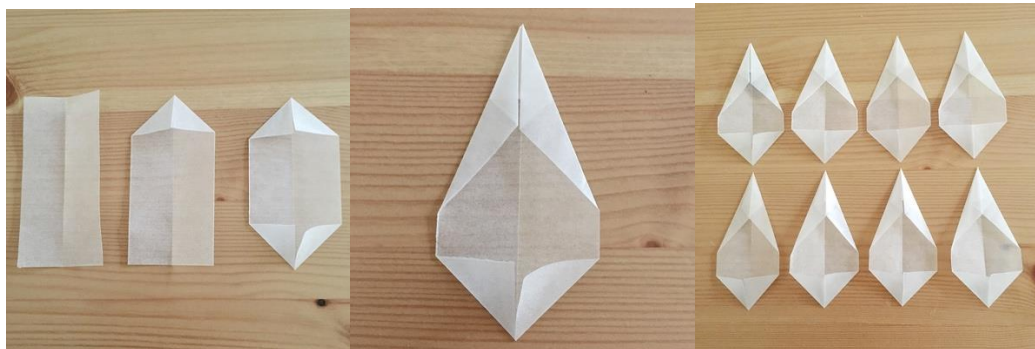

Window stars... star 2

Step 1: Fold the kite paper in half, then cut along the fold. Fold each half of the kite paper in half again, then cut along the folds. Fold each square of kite paper in half again, lengthways, then cut along the folds. You will end up with 8 rectangles of kite paper.

Step 2: Fold each square in half lengthways, so that when you open the paper it reveals two rectangles. Fold both top corners of the paper in to meet the centre fold, then fold both bottom corners in to meet the centre fold. Repeat this process with all eight pieces of kite paper.

Step 3: Fold the top corners in again to meet the centre fold. Repeat this process with all eight pieces of kite paper.

Step 4: Now you are ready to secure the pieces of kite paper together to form a star. Place a small dot of glue in the bottom right triangle. Lay your second piece of kite paper on top, as shown in the photograph. Repeat the process with all eight pieces, tucking the very last piece under the first and securing with glue.

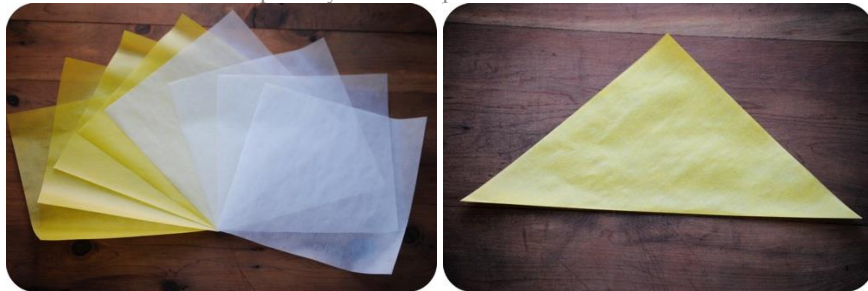

Window Star... Star 3

Step One:

Set out eight square pieces of kite paper.

Step Two: Start with one sheet of kite paper and fold it corner to corner, making a triangle shape. Make sure that the creases are sharp and your folds precise

Step Three: Unfold the last fold you made. Your kite paper will now be back to the original square shape with a sharp diagonal crease.

Step Four: Next you will recreate the very same fold, only this time fold the opposite side corner to corner.

Step Five: Next you will unfold this crease and your kite paper will be back to a square shape with an "X" folded into it.

Step Six: Lift the lower right corner to the centre and fold.

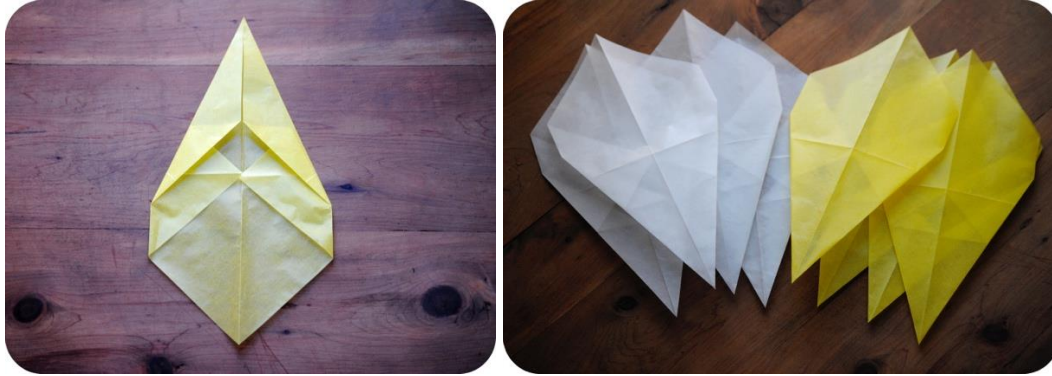

Step Seven: Repeat this step on the opposite side. Both corners will meet in the centre.

Step Eight: Next, turn paper (to match the photo above.)

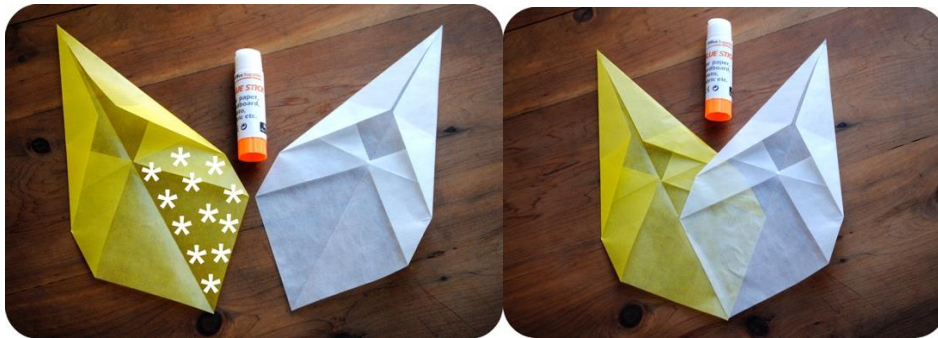

Starting from the very top point, match your paper right along the centre crease and fold.

Step Nine: Repeat this step on the opposite side starting from the very top point folding your paper over (as if you were creating a paper airplane) Your first piece to your star is now complete!

Step Eleven:

With a glue stick, spread glue onto your paper following the 'stars' on the photo.

Step Twelve: Press the two papers together and continue adhering each additional point in the same manner as shown in the next photo.
